Michigan State's athletic program had four positive COVID-19 test results among 33 athletes and one of seven staff members infected between Nov. 20 and Wednesday, according to numbers released Friday by the athletic department.

The previous week, four of 59 athletes and one of 27 staff members tested positive.

[Mel Tucker: We assume risks, make sacrifices to play]

MSU has conducted at least 3,142 COVID-19 clinical PCR tests on athletes and staff members since June. There have been 171 positive results among at least 2,652 tests on Spartan athletes and 13 COVID cases among more than 490 tests among staff members.

Individuals who tested positive and remain in isolation will undergo daily check-ins with athletic training staff. Additional services will be provided as directed by the medical and administrative staffs, and further testing and physician follow-up will be required prior to returning to any level of workouts.
